

Elevated Seismic Hazard Region Map

This map is an initial screening aid, with city location markers and hazard region boundaries that are approximate. The Seller/Serviceur must obtain a Peak Ground Acceleration calculation using the United States Geological Survey application at <https://earthquake.usgs.gov/hazards/interactive/> for any property in the Continental United States that may be located in an Elevated Seismic Hazard Region (the highlighted portions of the map). It is assumed that the PGA is at least 0.15g (and therefore a seismic risk assessment is required) for properties located in Hawaii, Alaska (limited to within 100 miles of the city of Anchorage or the Gulf of Alaska), or one of the US territories. For areas of Alaska outside the delineated area, the PGA is assumed to be less than 0.15g.
